Actuarial Valuation: Defined Benefit plans must have an actuarial valuation prepared by a certified actuary, at least, once every three years, and provide a copy of the valuation to the PRB.

Include within the valuation: recommended contribution rate needed for the system to achieve and maintain an amortization period that does not exceed 30 years, actuarial value of assets, actuarial accrued liability, present value of future benefits, annual payroll of members covered by retirement plan, percent of contributions devoted to normal cost, percent of payroll devoted to unfunded actuarial accrued liability contributions, amortization period, employer contributions, employee contributions, all actuarial methods and assumptions used to calculate these values, and a definition of the actuarial terms used within the valuation. The Employees

If the system's amortization period exceeds 40 years over a few valuations, the public retirement system and its associated governmental entity shall formulate a Funding Soundness Restoration Plan. Each public retirement system that formulates a funding soundness restoration plan shall submit a copy of that plan and any change to the plan to the PRB not later than the 31st day after the date on which the plan or the change is agreed to. The system shall report any updates of progress made by the entities toward improved actuarial soundness to the PRB every two years. If a system does not have its own website, it has the option to post the information on its sponsoring entity's website or on a state agency website, such as the PRB. The PRB will help systems without a website comply with these requirements through its agency website.
